Workshop in Maramureș, Creative initiative about green buildings

Workshop Overview and Objectives

The first international workshop of the BeCom project, titled "Co-design a Creative Initiative About Green Buildings Renovation Wave," takes place from 23rd to 26th September 2025 in Baia Mare and Băiuț, Maramureș, Romania. This workshop marks a significant milestone in the EU-funded project "Beautiful Communities – Enriching, Sustainable, Inclusive," which aims to empower communities through sustainable development and innovation inspired by the New European Bauhaus values. Participants from partner organisations across Europe gather to engage in collaborative sessions focusing on green building renovation, sustainability strategies, and community engagement.

Interactive Sessions and Practical Engagement

The agenda comprises a blend of formal presentations, co-design workshops, and practical site visits. Participants engage in planning activities for forthcoming local workshops and visit relevant sites such as a village museum and community garden to observe sustainable practices in real settings. The inclusion of a study tour to the historical region of Maramureș enriches cultural understanding alongside technical discussions, supporting a holistic approach to sustainability.

Community Collaboration and Project Outcomes

On the latter days, the workshop shifts to Primăria Băiuț, where a broader range of local stakeholders, including officials, community members, and social actors, participate in collaborative sessions to collect information on local needs and frame a draft vision for sustainable development.
